10. Anthropogenic character of landscapes in the Fertő–Hanság region	117
11. Land cover of the landscapes of the Fertő–Hanság region	117
12. Landscape character types in the Fertő–Hanság region	117
13. Main drivers of land cover change	119
14. Main tendencies and magnitudes of land cover change, 1990–2012	119
15. Stability of land cover (1990–2012)	119
16. Description of hemeroby levels based on the intensity of human intervention, grouped by landscape factors	120
17. Intensity of landscape transformation through human action (Hemeroby)	120
18. Level of survey of individual landscape values (2015)	121
19. Taxonomy of natural landscapes in the Carpatho–Pannonian Area	122–123
20. Landscape value	124
21. Old Dráva Landscape Rehabilitation Programme (Detail of water management plan)	125
22. Taxonomy of natural landscapes	126–127
23. Vulnerability of landscapes to climate change (until 2100)	128
24. Higher taxonomic levels of natural landscapes in the Carpatho–Pannonian Area	129

ENVIRONMENTAL PROTECTION	page
1. Inversion and ground inversion layering	130
2. Long-time temporal variation of atmospheric carbon dioxide concentration (1981–2017)	131
3. Long-time temporal variation of atmospheric sulphur dioxide concentration (1973–2016)	131

4. Long-time temporal variation of atmospheric nitrogen dioxide concentration (1974–2016)	131
5. Long-time temporal variation of the tropospheric ozone concentration (1990–2016)	131
6. Main characteristics of greenhouse gases playing a decisive role in the warming of near-surface air	131
7. Major anthropogenic sources of greenhouse gases	131
8. Emission of main greenhouse gases (1995–2014)	131
9. Changes in the emissions of sulphur dioxide, nitrogen oxides and particulate matter (1995–2014)	132
10. Annual mean SO ₂ concentration based on the measurements of automatic air pollution monitoring stations	132
11. Annual mean NO ₂ concentration based on the measurements of automatic air pollution monitoring stations	132
12. Number of limit value exceedances of particulate matter and ground-level ozone	132
13. 2020 targets for national emissions of pollutants in accordance with the Geneva Convention	133
14. Amount of emission allowances allocated free of charge (2015–2020)	133
15. Ecological quality status of surface waters (2009–2015)	134
16. Chemical quality status of surface waters (2009–2015)	134
17. Urban and agglomeration sewage treatment plants in the Carpatho–Pannonian Area (2012)	134
18. Municipal sewage treatment plants (2012)	135
19. Potential pollution sources from heavy industry in the Carpatho–Pannonian Area	135
20. Potential pollution sources from chemical industry, wood and paper industry and other sectors	136
21. Potential water pollution sources from animal husbandry and food industry	136
22. Areal distribution of the arsenic content of cold deep groundwater	136
23. Summer and annual average concentration of chlorophyll-a (1975–2014)	136
24. Quarterly change of nitrate content in groundwater wells at Dejtár and Dunakeszi	137
25. Chemical status of shallow porous and shallow mountainous water bodies	137
26. Limiting factors of soil fertility	138
27. Extent of soil conservation cultivation on agricultural areas	138
28. Susceptibility of soils to acidification	139
29. Rate and extent of soil compaction on agricultural areas	139
30. Vulnerability of soils to nitrate leaching on agricultural areas	140
31. Heavy metal content of soils	140
32. The quantity of produced waste according to waste type (2004–2015)	140
33. The quantity of municipal waste according to the type of collection (2004–2015)	141
34. Specific quantity of municipal waste transported from residents as part of municipal service	141
35. Average composition of municipal waste transported from residents as part of public services according to material type (%; 2015)	141
36. Trends in the methods of waste treatment (2004–2015)	141
37. The quantity of waste disposed in landfill (2004–2015)	141
38. Energetic utilisation of biogas obtained from various wastes (2017)	142
39. The quantity of recycled wastes (2004–2015)	142
40. The quantity and treatment of municipal waste (2000–2015)	142
41. Treatment methods of municipal waste transported from residents as part of municipal services (2015)	142
42. Municipal waste landfills (2012)	143
43. Facilities for waste disposal (2014)	143

NATURE CONSERVATION	page
1. Nationally protected natural areas and nature parks (2018)	145
2. Protected natural areas (1990–2018)	145
3. Changes in the number of protected and strictly protected species in Hungary (1993–2017)	146
4. Number of protected plant species	146
5. Proportion of protected plant species	146
6. Hungary’s national parks (2018)	146
7. Changes in livestock numbers managed by the national park directorates (1990–2016)	146

15. Natura 2000 sites	151
16. Statistics of the Natura 2000 network in some EU Member States	151
17. The most typical habitat types of the Pannonian biogeographical region in Hungary	152
18. Species of Community interest of the Pannonian biogeographical region in Hungary	153
19. Visitor centres and interpretation sites of national park directorates	154–155

NATURAL HAZARDS	page
1. An overview of the system of natural hazards and disasters	156
2. Number of earthquakes annually occurring in Hungary and major earthquakes in history	156
3. Predictable earthquake intensity.....	157
4. Seismic zones	157
5. Mass movement (chiefly landslide) hazards in Hungary	157
6. Mass movement	158
7. Landslide hazards and forms on the high bluff of the Hernád valley	159
8. Mass movements on the Dunakömlőd–Paks high bluff	159
9. Air pressure and wind field (at 19:00 on 15 May 2014).....	160
10. Air pressure at sea level and temperature	160
11. Maximum daily temperature (12 January 1987)	160
12. Snow cover depth (12 January 1987)	160
13. Precipitation sum in Central Europe between 7:00 on 30 May 2013 to 7:00 on 3 June	161
14. Positions of weather fronts and the warm and wet conveyor belt	161
15. Standardized precipitation index categories	161
16. Six-month national values of the standardized precipitation index (SPI) for August	161
17. National averages of Pálfaï’s drought index (PAI) (1893–2012)	161
18. Long-term averages of Pálfaï’s drought index (PAI)	161
19. Potential wind erosion	162
20. Soil erosion	162
21. Weather conditions favouring forest fire based on the Angström index	163
22. Vegetation and forest fires in Hungary (2007–2016)	163
23. Flood control and flood hazard	164
24. Weather situation causing flash flood	165
25. Flash flood hazard	165
26. Extent of invasive species	165
27. Excess water control and hazard	166
28. Distribution of common ragweed	167
29. Typical national distribution of common ragweed concentration in air	167
30. Natural hazards	167

LIST OF PICTURES

GEOLOGY	page
1. Pannonian basaltic hills of the Tapolca Basin	21
2. Former open-cast mine of Jurassic black coal next to Pécs	27
3. Abandoned open-cast mine of the former sideritic iron ore mine in Rudabánya	27
4. Pipe of Pannonian basalt volcano on Ság Hill	33
5. Middle Miocene shallow marine limestone in a former quarry at Fertőrákos; today it is a nature conservation interpretation site and a theatre as well	34
6. The so-called ‘Babás-szerkövek’ (Babe stones) above Kővágószőlős made up of Early Triassic fluvial sandstone	34
7. Late Triassic shallow marine dolomite in the Séd valley of Veszprém	34
8. Pannonian columnar basalt in the quarry pit of Hegyes-tű Hill in the Balaton Uplands	35
9. Karren surface of Middle Triassic limestone above Lake Ágtelek	35
10. Eroded surface of Early Miocene rhyolite tuff in the vicinity of Kazár	35
11. Lamellar basalt of the top level of the Kis-Salgó Hill (or Boszorkány-kő) in the Medves Region	35

GEOPHYSICS	page
1. Map of the Mór earthquake in January 1810 (1814)	39
2. Radó Kövesligethy (1862–1934), the pioneer of Hungarian earthquake research	39

RELIEF	page
1. Făgăraș Mountains	44
2. Southerly exposed slope in the Outer Somogy Hills near Karád village	48
3. Göcsej Hills near Kustánszeg	48
4. Undulating landscape in the Transylvanian Basin	48
5. Doline row in the dissected piedmont hills of Pádurea Craiului Mountains	48
6. The Borecsu planation surface in the Retezat Mountains	49
7. Typical sandy area in the Kiskunság	49
8. Dráva Plain at Szaporca, southern Baranya County	49
9. Typical Nyírség landscape, Debrecen-Ligetajla	52
10. Loess wall with intercalated palaeosols at Báta	52
11. Typical Hortobágy landscape near Ágota-pusztá	52
12. Point bars of the Tisza at Rakamaz	53
13. Kis-Sárrét landscape at Biharugra	53
14. Hanság landscape at Földsziget (Csorna)	53
15. Somló, a lava-capped residual hill	53
16. Völgyseg landscape near Nagyhajmás	53
17. The Tés Plateau in the Eastern Bakony	55
18. The Lower Gerecse Mountains near Tarján	55
19. Middle Triassic dolomite horsts in the Buda Mountains, near Budaörs	55
20. The Teve-sziklák (Camel Rocks) in the Pilis, near Pilisborosjenő	56
21. The Visegrád Mountains with the Visegrád castle in the Danube	56
22. The volcanic range of the Börzsöny viewed from Nagybörzsöny	56
23. Hilly landscape in the Cserhát with the double peak of the Szanda dyke in the background	56
24. The Medves Region with the volcanic neck of Somoskő (Somoška) Castle	56
25. The Mátra Mountains with Kékes, the highest peak of Hungary	56
26. The volcanic Sátor Hills in the Tokaj (Zemplén) Mountains at Sátoraljaújhely	56
27. The Bükk and the Bükkalja near Noszvaj	57
28. The Slovak Karst with Turňa (Torna) Castle in the foreground	57
29. The Vadász Stream valley in the Cseréhát Hills	57

CLIMATE	page
1. Cold air pool in the Mátra Mts. Because of the clear air, the Börzsöny Mts. can be seen on the horizon 80 km away... ..	59
2. The frozen Szinva Waterfall, Lillafüred	61
3. Air flowing out of a summer thunderstorm (straight-line wind) and stripe of precipitation above Lake Balaton	63
4. The condition of poplar trees after a wind storm indicating the strength and direction of the wind	65
5. Satellite image of a cyclone above Europe (14 August 2012).....	68
6. Satellite image of the Carpatho–Pannonian Area in mainly clear weather (20 June 2013)	68
7. Anomalies in the vegetation index in August of 2010	68
8. Anomalies in the vegetation index in September of 2012	68

WATERS	page
1. The view of Budapest with Margit Island	72
2. The Váh River at Strečno Castle	72
3. The Rába River at Győr	72
4. The Sió River and its sluice at Siófok	72
5. The Dráva River	72
6. The Tisza at Tiszainoka	72
7. The Someşul Mic (Kis-Szamos) at Cluj-Napoca	72
8. The Sajó at Miskolc	72
9. The Holt-Körös at Szarvas	73
10. The Mureş (Maros) at Sălard (Mureş County)	73
11. Inundated and flooded areas in the Carpathian Basin before the start of flood control and drainage works	73
12. The view of Lake Balaton from Fonyód	73
13. Aerial view of Lake Fertő (Neusiedl) from near Balf	76
14. Aerial view of Lake Velence	76
15. Lake Roşu (Gyilkos)	76
16. Lake Sfânta Ana (Szent Anna)	76
17. Lake Tisza	77
18. In the Alföld, one of the types of dug wells is the shadoof, which is also a typical landscape element	77
19. Excess water inundation at Kaba	79
20. Fed by thermal springs, Lake Hévíz is also famous for its healing power	79
21. The Buda thermal water, Molnár János Cave	80

VEGETATION	page
1. Natural vegetation of the Carpatho–Pannonian Area	94
2. Sand oak steppe forest is a unique vegetation mosaic of the Hungarian landscape	94
3. Saline steppe is the most extensive of Hungarian ancient vegetation types	95
4. <i>Seseli leucospermum</i> , an endemic species of open dolomite grasslands	97
5. Mesophilous forest with varied structure and rich herb layer	98
6. Typical Pannonian landscape with extrazonal submontane steppe meadows and dry oak forests	98
7. Cowherb (<i>Vaccaria hispanica</i>) has almost disappeared because of modern agriculture	100
8. The massive advance of an alien invasive species, the common milkweed (<i>Asclepias syriaca</i>) in a sandy habitat	100
9. Natural floodplain communities are confined to some unregulated river segments	100
10. Hilly landscape with cultivated areas, regenerating habitats and spreading invasive species	101

ANIMALS	page
1. Hungarian ground beetle (<i>Carabus hungaricus</i>)	106
2. Pannonian zephyr blue or steppic blue of the Fót Hills (<i>Kretania pylaon</i>)	106
3. Hungarian mole rat (<i>Namospalax hungaricus</i>) from Southeastern Hungary	107
4. Turkey-oak owlet (<i>Dioszeghyana schmidtii schmidtii</i>)	107
5. Banat land snail (<i>Drobacia banatica</i>)	107
6. Transylvanian bush-cricket (<i>Pholidoptera transylvanica</i>)	108
7. Alpine newt (<i>Ichthyosaura alpestris</i>)	109
8. Balkan wall lizard (<i>Podarcis tauricus</i>)	109
9. Caspian whipsnake (<i>Dolichophis caspius</i>)	109
10. Rákos meadow viper (<i>Vipera ursinii rakosiensis</i>)	110
11. Clouded Apollo (<i>Parnassius mnemosyne</i>)	110

LANDSCAPES	page
1. The most common type of Hungarian cultural landscape with mixed arable land use in the Hernád Valley (near Boldogkőváralja)	112
2. The Bodrogköz region at Zalkod. During the Hungarian Conquest the low and high floodplain surfaces along rivers were settled first	112
3. Dissected loess hills with brown earth. Hills along the Koppány Stream near Somogyacsa	116
4. The Szekszárd Hills near Szálka	116
5. The lowest lying, reed-covered section of the Fertő (Neusiedler See) Basin and the lakeshore zone with the mosaic of grasslands and arable fields	118
6. Open water surface of Lake Fertő (Neusiedler See) with decisively recreational use	118
7. The Balf–Rust Hills and the slopes of the Leitha Mountains. ..	118
8. Vineyards on the southern slopes of the Leitha Mountains, looking onto Lake Fertő (Neusiedler See)	118
9. Nyírség landscape with declining stability of land use – in spite of protection. Mosonta-kert, Létavértes	118
10. Metahemerobic landscape detail caused by opencast mining near Gyenesdiás, Keszthely Mountains	121

11. Close-to-natural, oligohemerobic landscape along the Tisza, at Gergelyugornya	121
12. Typical landscape with saline berms in Hortobágy	121
13. The visual value of the landscape is strongly influenced by actual vegetation cover and the even more variable weather conditions. Landscape before storm near Tiszaörs (Central Tisza Plain)	124
14. Landscape conflict in the environs of the Visonta power plant (Mátraalja)	124
15. Former mine landscaped and afforested and now safe to visit: Bauxite Geological Park near Gánt	124
16. Landscaped former pit of abandoned opencast lignite mine near Ecséd (Mátraalja)	125
17. One of the wetlands most exposed to predictable climate change in the Upper Tisza Plain. Boroszló-kert, Gulács	128

ENVIRONMENTAL PROTECTION	page
1. Stratus clouds of cold air cushion developed above the Alföld as viewed from the Bükk Mts.	130
2. Smog in Debrecen at the end of November 2016	130
3. TV-transmitter station at Hegyhátsál with the monitoring station of OMSZ	130
4. Background air pollution monitoring station at K-pusztá (Kecskemét)	130
5. Dorr-type settlers (foreground) and biological wastewater treatment basins (in the background)	134
6. Biological sewage treatment with activated sludge system, with putrefactive towers in the background	135
7. Water pollution from stalls in the Alföld	135
8. Eutrophication in Cseröközi-Holt-Tisza	137
9. Severe sheet erosion (light spots) in Hajdúhát arable fields	138
10. Consequence of wind erosion: sand cover deposited on arable field (Nyírség)	139
11. Remediation of a former military airfield: cleaning of oil polluted soil and groundwater	140
12. Environmental remediation of former waste depot	140
13. Mountainous insulated landfill in open pit	142

NATURE CONSERVATION	page
As part of Fig. 17: Pannonic salt steppes and salt marshes	152
Subcontinental Peri-Pannonic scrub	152
Pannonic rock grasslands	152
Subpannonic steppic grasslands	152
Pannonic loess steppic grasslands	152
Pannonic sand steppes	152
Riparian mixed forests	152
Pannonic oak-hornbeam woods	152
Pannonian woods with pubescent oak	152
Euro-Siberian steppic woods	152
Pannonic Turkey oak – sessile oak woods	152
Pannonic inland sand dune thicket	152

As part of Fig. 18: Scaly snail of Doboz (<i>Kovacsia kovaci</i>)	153
Keeled plump bush-cricket (<i>Isophya costata</i>)	153
European mud-minnow (<i>Umbra krameri</i>)	153
Striped ruffe (<i>Gymnocephalus schraetser</i>)	153
Pied avocet (<i>Recurvirostra avosetta</i>)	153
Saker falcon (<i>Falco cherrug</i>)	153
Red-footed falcon (<i>Falco vespertinus</i>)	153
Great white egret (<i>Egretta alba</i>)	153
Eastern imperial eagle (<i>Aquila heliaca</i>)	153
Great bustard (<i>Otis tarda</i>)	153
Greater noctule bat (<i>Myotis lasiopterus</i>)	153
Root vole (<i>Microtus oeconomus</i>)	153
Hungarian pasque flower (<i>Pulsatilla flavescens</i>)	153
Stool iris (<i>Iris aphylla hungarica</i>)	153
Pannonian ferule (<i>Ferula sadleriana</i>)	153
Marsh gladiolus (<i>Gladiolus palustris</i>)	153

NATURAL HAZARDS	page
1. Recent landslides on the high bluff of the Danube at Dunaszekcső	157
2. Recent roadcut slide in the Hernád Valley, near Gibárt (2013)	157
3. High bluff at Balatonföldvár	157
4. Terraced revetments along the Dunaújváros bluff of the Danube	159
5. Supercell above Lake Balaton	160
6. Flood peak in Budapest, on 10 June 2013	161
7. Wind erosion in spring in the Hajdúhát	162
8. Soil erosion near Somogydöröcske	163
9. The Tisza dike break in 2001 at Tivadar	163
